DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, and 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Virnig '055.

Virnig teaches a process for extracting and recovering copper from an aqueous solution containing copper values by contacting the aqueous solution with a water insoluble extraction reagent composition comprising aldoxime, ketoxime and a equilibrium modifier (Column 2 Line 34-45). The composition has a degree of modification of between 0.2 and 0.95, preferably between 0.4 and 0.9. Virnig teaches that the ketoxime may be 5-dodecyl-2-hydroxy acetophenone (Column 4 Lines 45-50) and that the aldoxime may be 2-hydroxy-5-nonyl benzaldoxime (Column 4 Lines 26-39) or 2-hydroxy-5-nonylbenzophenone oxime (Column 3 Lines 65-67). The equilibrium modifier may be 2,2,4-trimethylpentane-1,3-diol diisobutyrate (Column 7 Line 35-36).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1-7 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Virnig '055.

Virnig teaches that the extractant is a hydroxyl aryl oxime (Claim 4) and that the hydroxyl aryl oxime may be the aldoxime 5-nonylsalicylaldoxime (Claims 6 and 10). Although, the 5-nonylsalicylaldoxime claimed by Virnig is not presented identically to the instantly claimed 2-hydroxy-5-nonylsalicylaldoxime, the 5-nonylsalicylaldoxime of Virnig is either inherently identical to 2-hydroxy-5-nonylsalicylaldoxime or it would be obvious to use 2-hydroxy-5-nonylsalicylaldoxime in the place of the 5-nonylsalicylaldoxime of Virnig. This is suggested by the fact that the 5-nonylsalicylaldoxime of Virnig is selected from **hydroxyaryl** oximes (Claims 4,6 and 10).
